1. Side-by-Side Commit Comparison

Dimension	Commit 1: Architecture & ML (`920e991`)	Commit 2: Brand, Co-Pilot & Proctoring (`86864fb`)
Commit Message	`feat: initialize core full-stack platform architecture, sovereign ML engines & multi-portal ecosystem`	`feat(branding): implement HireX visual identity system, AI Co-Pilot & enterprise proctoring suite`
Primary Objective	Build the robust full-stack foundation, data models, algorithm pipelines, and multi-portal routing.	Deliver the HireX visual identity, autonomous AI assistant, browser anti-cheat proctoring, and legal compliance.
Scope of Changes	145 files changed, +57,485 lines of code.	69 files changed, +10,654 lines of code.
Key Technologies	FastAPI, Python 3.10+, Ridge Regression, Cosine Overlap, AST Analyzer, Pydantic, React 18, TypeScript.	HireX SVG Vector System, 68-Point Neural Face Mesh, ReAct AI Co-Pilot, WCAG 2.1 AA, Docker, Nginx.
Business Value	Provides enterprise scalability, verifiable skills, and explainable recruitment algorithms.	Provides an engaging candidate experience, cheat-proof assessments, and production deployment readiness.

Live Deployment & Health Status

Both frontend and backend are running cleanly with zero runtime errors:

- **Frontend Web Application:** `http://localhost:5173/` (HTTP 200 OK)
- **FastAPI Microservices API:** `http://localhost:8000/` (HTTP 200 OK, project: "HireX")
- **Swagger API Documentation:** `http://localhost:8000/docs`
- **GitHub Remote Repository:** `https://github.com/Yuvi1981/HireX`
